Specification:	The <i>EXTRACTME</i> DNA CLEAN-UP AND GEL-OUT KIT is designed for the rapid and efficient purification of DNA fragments after enzymatic reactions and directly from agarose gels (standard and low-melting point agarose gels run in either a TAE or TBE buffer). It efficiently removes nucleases, enzyme inhibitors, detergents, restriction enzymes, polymerases, divalent ions, agarose, ethidium bromide and other contaminants. The purified DNA can be used in common downstream applications. The kit enables the purification of DNA fragments from 50 bp to 30 kb, as well as plasmid and genomic DNA. However purification of fragments smaller than 100 bp and larger than 10 kb will result in decreased recovery rates. The purification protocol and buffer formulations were optimized for high yields and purity of DNA. The product is intended for research use only.

QUALITY CONTROL

The quality of each production batch (LOT) of the *EXTRACTME* DNA CLEAN-UP & GEL-OUT KIT is tested using standard QC procedures. The purified DNA concentration and quality are evaluated by gel electrophoresis and spectrophotometer
