Specification:	The <i>EXTRACTME</i> DNA GEL-OUT kit is designed for the rapid and efficient purification of DNA fragments directly from agarose gels (standard and low-melting point agarose gels run in either a TAE or TBE buffer). Agarose, ethidium bromide and other contaminants from a sample are effectively removed in the purification process. The kit enables the purification of DNA fragments from 50 bp to 30 kb, as well as plasmid and genomic DNA. However purification of fragments smaller than 100 bp and larger than 10 kb will result in decreased recovery rates. The purified DNA can be used in common downstream applications. The purification protocol and buffer formulations were optimized for high yields and DNA purity. The product is intended for research use only.

QUALITY CONTROL

The quality of each production batch (LOT) of the *EXTRACTME* DNA GEL-OUT kit is tested using standard QC procedures. The purified DNA concentration and quality are evaluated by gel electrophoresis.
