Specification:	<i>TaqNovaHS</i> Polymerase is a mixture of thermostable <i>Taq</i> DNA polymerase isolated from <i>Thermus aquaticus</i> and a highly specific monoclonal antibody, which acts as an inhibitor of the polymerization activity. The antibody binds reversibly to the enzyme, inhibiting polymerase activity at ambient temperatures, which prevents extension of non-specifically annealed primers and primer-dimers formed at low temperatures during PCR setup. The enzyme catalyses DNA synthesis in a 5'→3' direction, shows no 3'→5' exonuclease activity, but has a 5'→3' exonuclease activity.

QUALITY CONTROL

The product was tested in PCR reaction, with a dilution series of polymerase and with a dilution series of human genomic DNA. The product is free of unspecific DNA nucleases.
